

Join the exploration adventure in Sardinia: Cave Diving Class with InnerSpace Explorers

The international dive training organization for hands-on and substantiated education in advanced diving offers a cave diving class in Italy

Munich, August 03, 2011 – The fascinating caves in the Mediterranean are a paradise for technical divers.

When it comes to visibility, water temperature and natural beauty, the caves under water surrounding the Italian island of Sardinia are not far off from those in Florida – but easier to reach for anyone based in Europe. For divers who are keen to explore the caves under professional guidance, dive training organization InnerSpace Explorers (ISE) offers the course “Cave Explorer Level 1”. ISE puts a strong focus on hands-on training and education. For the course in October, some seats are still available.

Besides the special aspects of diving in a cave environment, skills such as stress management, teamwork, and linework will also be trained. The stalactite caves of Sardinia are easily reachable by boat, hence not requiring the tedious climb to the entrance often done on other Mediterranean islands.

Furthermore, Sardinia offers long sandy beaches, old Saracens towers and a rustic yet always fresh and tasty Sardinian cuisine.

Date: October 10 – 16, 2011.

Price for course and accommodation including breakfast: 1,800 €/person.

About InnerSpace Explorers – Education & Training, Research & Exploration

InnerSpace Explorers (ISE) is an international dive training organization putting its focus on the exploration of the underwater world as well as on teaching technical diving skills. The challenging trainings and workshops demonstrate the participants their individual limits in diving along with solutions how to overcome those barriers. The skills and knowledge acquired by the students allows them to participate in exciting exploration projects and to always “stay cool” even in extreme situations.
